

Suggested Installation for Floating Shelf Sets using the included Hanger Board system

The hanger board is only a suggested method; your installer may have additional methods for mounting your shelves. Always consult a professional.

THANK YOU FOR PURCHASING A PEARL MANTELS™ FLOATING SHELF SET!

No Assembly is Required

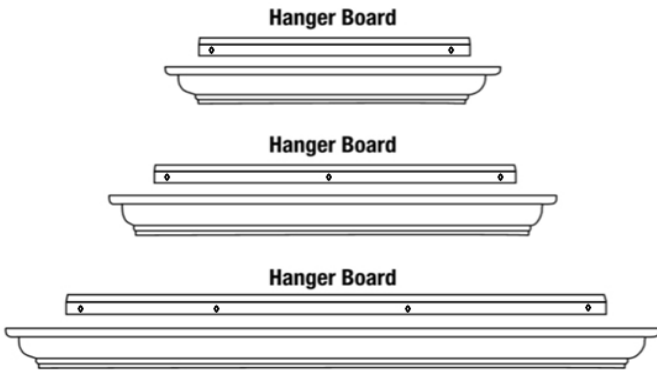

Look for the Pearl Inlay on the right-hand corner of your new mantel shelf.

This is your guarantee of an authentic Pearl Mantels™ product!

Included in your carton: 3 Shelves ((1) 18", (1) 24" and (1) 36"), 3 Detached, pre-drilled, Mitered Hanger Boards (Hardware to install detached hanger boards not included), Instruction Sheet, Certificate of Authenticity and Warranty/Disclaimer.

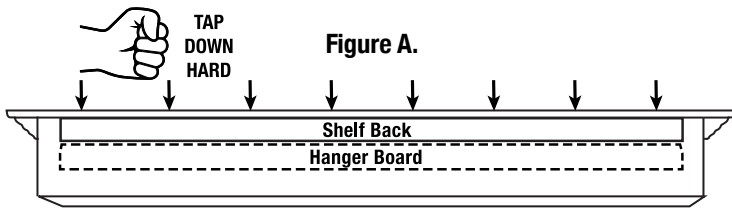

Not included: Mounting hardware for detached hanger boards. There are many different mounting surfaces, i.e. drywall, stone, paneling...and each requires a different hardware for secure attachment. **Always consult a professional.**

If installing over a fireplace, Wood and MDF (Medium Density Fiberboard) are combustible materials. Heat clearances must be adhered to. Before installing, adhere to your local building codes and manufacturer's requirements for your specific firebox or stove.

The Hanger Board system consists of 2 mitered hanger boards, one is attached to the back of the shelf and the other is packed separately in the carton and will attach to your mounting surface. When married together, the shelf will be locked in place on the wall.

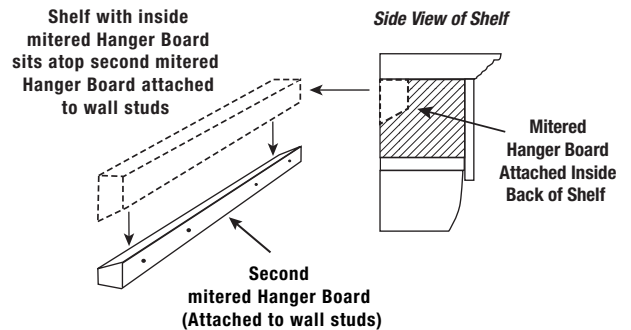

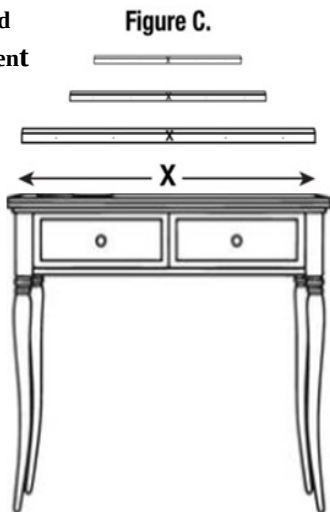

To properly engage and lock into place the mitered hanger boards for each shelf, please make a fist and tap hard along the back edge of the shelf where it meets the wall ensuring they are securely seated together. (See Figure A.).

Measuring: Measure from bottom of the shelf to the bottom of the hanger board (1) (See Figure B.). This measurement is where the bottom of the shelf will be when mounted on the hanger board and IF installed above a fireplace, this distance must be in compliance with heat clearance requirements of the firebox and building codes.

Measure from whatever surface you are mounting your shelf set over (i.e. countertop, desk top, sink top...) to where the bottom edge of the hanger board will be, remembering to add the distance to the bottom of the shelf (see Fig. B.), and mark your recorded measurements on the wall both right and left. Center your hanger board (see Figure (C)), ensure your hanger board holes align to studs and mount the hanger board so that the bottom of the board is on your recorded marks. Hang your shelf. Some surfaces may not be flush which may require shims or filling of gaps. **Always consult a professional.**

Use a level tool
on each hanger board
before final attachment

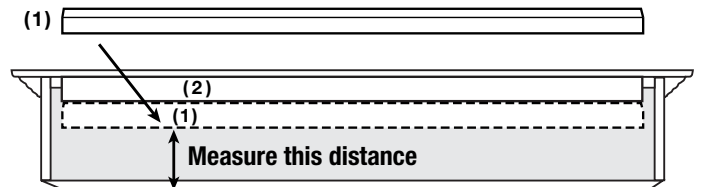

*** Mounting hardware for detached hanger board is NOT INCLUDED.**

Attaching to studs and/or use of wall anchors are preferred methods. Each hanger board is pre-drilled. If additional holes are necessary, pre-drill pilot holes.

Figure B.

Marry Hanger Boards (1) & (2) together, then measure from the bottom of the Shelf to the bottom of Hanger Board (1)

Centering: Find center point over the surface you are mounting above (i.e. countertop, desk top, sink top...) by measuring from one side to the other, mark the center point on mounting surface, do the same for the hanger board. (See Figure C.)

Always consult a professional.
